

## PROFESSIONAL EXPERIENCE

### Business Intelligence Analyst, G-Square Tech, Florida

Aug 2023 - Present

- Extracted datasets using Snowflake, executing complex SQL queries to retrieve business-critical data. Improved data retrieval efficiency by 30%, on data requests from CRM and SFE teams.
- Automated data transformation workflows using Alteryx, reducing manual data preparation tasks by 40%. Ensured data cleanliness and accuracy, supporting timely and efficient reporting processes.
- Developed Power BI dashboards to visualize key performance indicators (KPIs) and business metrics, incorporating DAX queries to create dynamic reports using standard practices. This enabled deeper analysis of metrics such as profit margins, growth rates, and operational efficiency improved business strategies.
- Integrated GA4 data and created custom reports in Looker Studio to provide real-time insights on website performance and user engagement trends, enabling product managers to track traffic patterns, user behavior, and engagement metrics, which helped build features to improve user experience.
- Supported business strategy insight generation by analyzing key performance data and generating comprehensive reports that highlighted market trends, customer behavior patterns, and operational inefficiencies. Delivered actionable insights that directly influenced business planning and growth initiatives.

### Data Analyst Intern, Aganitha cognitive solutions, India

Jan 2021- Dec 2022

- Leveraged core SQL functionalities within Microsoft SQL Server, including complex joins, subqueries, and aggregate operations, to extract and manipulate datasets. Used SQL for tasks such as filtering, sorting, and grouping data to prepare it for further analysis, ensuring data accuracy and efficiency in reporting workflows.
- Utilized R to perform comprehensive data exploration, applying statistical summaries and visualizations to evaluate key metrics, identify trends, and uncover relationships within the dataset. This enabled a thorough understanding of the data, supporting more informed analysis.
- Developed performance-tracking Tableau dashboards for the APAC region using data. This helped stakeholders in identifying cost-saving opportunities that resulted in a 15% boost in operational performance.
- Created Tableau dashboards for the sales teams in the APAC region, ensuring data accuracy. Reduced manual input by 30% through automated updates, enabling faster decision-making.
- Collaborated with cross-functional teams to identify the business requirements to create the dashboards.

## EDUCATION

Master's in Business Analytics → **University of New Haven**, West Haven, CT

Bachelors in Electronics and Computer Engineering → **SNIST**, Hyderabad, India

## SKILLS

- **Data Visualization Tools:** Excel, Tableau, PowerBI, R Shiny, Matplotlib, ggplot2.
- **ETL Tools:** Docker, Alteryx, PySpark, and Dataiq.
- **DataBase Skills:** Snowflake, Microsoft SQL Server, MySQL and PostgreSQL.,
- **Analytical Skills:** Data Mining, Data Visualization, Statistical Analysis, Business Intelligence .
- **Machine Learning Libraries:** PyTorch, TensorFlow, Keras, NumPy, Pandas, Scikit-learn, Caret.
- **Programming:** Python, R, SQL, Javascript.
- **Interpersonal Skills:** Stakeholder management, Communication and Presentation.

## KEY ACADEMIC PROJECTS

### Facial Recognition and Emotion Detection [GitHub](#)

Capstone project at UNH

- Developed a machine learning model for real-time facial emotion recognition, achieving 95% accuracy. The CNN-based model was optimized through hyperparameter tuning and data augmentation techniques. Integrated with OpenCV for live emotion detection, enabling practical applications like human-computer interaction.

### E-commerce sentiment analysis system

- Developed a sentiment analysis system that increased Facebook dialog accuracy by 20%. Implemented using NLP techniques and optimized through feature engineering and model tuning, enabling more accurate sentiment classification in real-time interactions.

### Stroke rate prediction

- Implemented an R-based data analysis model incorporating regression analysis and hypothesis testing to uncover trends and relationships. Visualized key insights and results using ggplot2, providing clear and actionable data interpretations for stakeholders.
